

## HyWatts' Regulatory Roadmap & Strategy

HyWatts' hydrogen systems will be installed as part of larger construction projects, requiring individual approval from the local jurisdiction. Obtaining the required permits will be managed by the general contractor of the project. HyWatts will support the permitting process by providing the necessary documentation for the equipment, showing adherence to the pertinent standards such as ASME B31.3 Process Piping, ASME B31.12 (2014) H2 Piping, ASME BPVC, NFPA 853 Installation of Stationary Fuel Cell Power Systems, etc.

In case standardized sub-modules such as High Temperature Electrolyzer or Reversible Fuel Cell Stack show high market potential, we will seek UL 1212-01 approval for the modules.
